

NameTBC

Website Content Plan

What each page says, and why — grounded in the real product

Prepared from a 10-agent audit of every ActivityOS portal,
then stress-tested by a 7-critic adversarial review.

Ready-to-build content plan for the marketing website. Every headline, subhead and bullet below is publishable copy drawn from the real, shipped product. Voice throughout: **"Fill your sessions. Lose the admin. Own your brand."**

v2 rewrite: over-claims removed so the site is demo-safe (we claim only what the code ships today; roadmap AI is clearly labelled "coming" or "in beta"); proof, trust, migration and self-serve paths added; voice tightened. Change log at the end.

Naming note (P0 — blocks launch). This plan is written with [Name] as a placeholder. The name is on the critical path, not a footnote: the whole positioning is "your brand, not ours", which needs an "ours" to name, and there is a near-collision with the schools-only activityos.co.uk. Choose, trademark-check and secure the domain for a name **before** any copy is finalised, and scrub every placeholder from build assets and <title> tags. Naming direction in §5.1.

1. Strategy in a page

What we are. [Name] is the operating system for UK children's activity providers — one place to sell activities, run the day, pay the team and grow a network, on a single login from a solo coach to a national franchise. It is not a booking widget with extra tabs; it is the back office of a national operator, run from a phone.

Who it's for. Three audiences on one platform: the **freelancer** (solo coach, tutor, instructor), the **company** (multi-staff camps, clubs and wraparound care, including owner-operators running several of their own sites), and the **franchise / head office** (a branded network of franchisees).

The core promise — three things rivals give up on.

1. **Your money.** No commission. Card payments are Stripe Connect *direct* charges into the provider's own bank — we never hold, pool or pay out your money. You pay one flat subscription and your card processor's standard fee (the same fee a marketplace charges you *on top of* its cut). That last part — a direct charge into your own account — is the piece SaaS rivals who bank your takings first can't match.
2. **Your brand.** Parents book, pay and get updates under the provider's name, never ours. No marketplace renting a provider their own customers back.
3. **A full back office with a live-data AI copilot.** Registers, ratios, safeguarding, staff, a finance hub and a franchise layer — plus an AI copilot that answers from *your* live operational data, scoped by role. A bolt-on help-page chatbot can't do that, because it doesn't sit on the data.

Brand voice. Confident, plain-spoken, on the provider's side — a fellow operator who's done the 6am register, not a SaaS marketer. Active voice, short sentences, UK spelling, "you" and "your". Concrete over clever ("£29 a month, no commission" beats "flexible pricing solutions"). No jargon — no "seamless", "empower", "end-to-end", "solutions", and never the word "role-scoped" in customer-facing copy (say what it means: "each person sees only what they're allowed to"). Money and child safety are the emotional core.

The order we lead in. Money first, brand second, back-office-with-AI third. The AI is a genuine differentiator, but 2026 buyers are AI-fatigued and a camp owner cares first about keeping their income and filling seats. We lead the demo and the copy on the provable money and brand wedges, and let the AI land as the thing that makes the whole system smarter — not as a six-strong "team" that's mostly roadmap.

Why we're rebuilding. The current site reads like every other "booking software" page and buries the three things that make us different — the money is yours, the brand is yours, and you get a full operating system with a live-data AI, not a checkout. The rebuild leads with positioning and *proof*, not a feature list.

2. Sitemap

Launch set (build first)

Page	Purpose	Primary audience	Why it exists
Home	Land the positioning in one screen: your brand, your bank, your back office. Route to persona and pricing pages.	All three personas	Top-of-funnel hook; the branded-storefront + no-commission story is the strongest first impression.
Platform overview	Show the operating-system breadth — sell / run the day / manage the team / handle money / grow / scale — in one scannable map.	Company, franchise (evaluators)	Proves we're a system, not a widget; the page that reframes the category.
AI ("Your live-data copilot")	Make the differentiator its own destination — honestly split into shipped vs coming.	All personas	An AI grounded in <i>your</i> live operational data is a structural edge; it needs room to breathe.
For Freelancers	Convince a solo operator they don't need Eventbrite/Class4Kids/a marketplace.	Freelancer	Distinct pain (thin margins, no time, no brand) and a distinct £29 self-serve promise.
For Companies	The full HR + safeguarding + money lifecycle at multi-site scale, priced by team size.	Company (incl. owner-operators of several sites)	Different buying centre and different objections (five disconnected tools).
For Franchises / Head Office	The franchisor command centre: territories, royalties, oversight, per-franchisee branding.	Franchise / HO	The strongest structural moat; no widget models the HO→franchisee relationship.
Parents ("The family experience")	Sell the branded parent app to the provider; reassure them families will adopt it.	Provider (about their parents)	The bit customers touch; ownership + retention + languages.
Pricing	Flat-fee narrative + concrete plan table + card-fee honesty + no lock-in.	All personas	No-commission vs %-skimming is our sharpest wedge and lives here.
Why us (vs booking platforms)	The comparison table + proof; out-position rivals fairly.	Evaluators, late funnel	Buyers compare; give them defensible ammunition on one page.
Security & data protection	Answer the first due-diligence question for a children's-data product.	Company, franchise, cautious freelancer	Data custody is a silent dealbreaker; this page removes it.
About / Why we built this	The founder-operator credibility that carries a new, customer-light brand.	All personas	"They get me" beats features for a challenger with no logos yet.

Page	Purpose	Primary audience	Why it exists
FAQ	One place for the recurring objections: switching, security, contract, support, parents.	All personas	Deflects the buyers who won't book a call until a fear is answered; long-tail SEO.
Book a demo / Contact	Convert considered buyers; qualify by persona.	Company / franchise mainly	Bottom of funnel for the higher-touch personas.
Legal & footer	Privacy Policy, Terms of Service, Cookie Policy, Accessibility statement, company details, cookie-consent banner.	All	Legal requirement day one; blocks the contracting step for companies otherwise.

Phase-two (add once the launch set ships)

- **Feature deep-dives:** *Bookings & storefront*, *Money & payments*, *Staff & HR*, *On the day (safeguarding)*, *Marketing & growth* — linked from Platform overview. Each is rich enough for a dedicated page; buyers who reach one are high-intent.
- **Integrations** page (Xero, QuickBooks, Sage, Stripe) — a section on Platform overview at launch, its own page later.
- **Resources / Guides** hub for organic acquisition — e.g. "EYFS ratios explained", "Safer-recruitment checklist", "Tax-Free Childcare for providers". Leverages the compliance depth already in-product.
- **"Alternative to [competitor]" comparison pages** for the 2–3 rivals buyers actually name — fair and factual, routed into the same CTAs, to capture near-purchase search.

Cut / hold. Do **not** build a public class directory or cross-provider marketplace page — it's a deliberate Phase-2 opt-in and unbuilt, and "no shared marketplace" is the *stronger* position. Do not build a standalone SMS-broadcast claim page — SMS is a plan allowance, not a live channel.

3. Page-by-page content

*CTA strategy (applies site-wide). Two clear paths, chosen by persona, never more than one primary action per page. - **Freelancer + top-of-funnel:** primary **"Start free"** (self-serve trial / no-card sandbox); secondary **"Book a demo"**. A £29 buyer will try it tonight, not schedule a call. - **Company + Franchise:** primary **"Book a demo"** (considered, multi-stakeholder buy); secondary **"See pricing"**. - Every primary CTA carries a one-line reassurance nearby: **"No contract, cancel anytime, and your data is always yours to export."** (If self-serve signup isn't live at launch, "Start free" routes to a no-login interactive sandbox — never a dead button. See Appendix B.)*

3.1 Home

Goal: In one screen, make a provider feel the three wins (money, brand, back office) and click through to their persona or Pricing.

Hero

- *Eyebrow:* The operating system for children's activity providers
- *Headline:* **Your brand. Your bank account. Your whole operation in one place.**

- *Subhead:* Sell activities, run the day, pay the team and grow — from a solo coach to a national network, on one login. Parents book on your brand, the money lands in your account, and we never take a cut of your bookings.
- *Primary CTA:* Start free · *Secondary CTA:* Book a demo
- *Under the CTAs (trust strip):* No commission · UK-hosted, GDPR-built · Cancel anytime · Built by people who've run the register

Band 1 — The three that matter (three cards)

- **No commission — you keep your bookings.** Card payments land straight in your own bank through your own Stripe account. You pay one flat fee and the standard card charge — nothing else, and never a slice of what parents pay you.
- **Your brand out front, not ours.** Parents book on a page carrying your name, colours and listings. No marketplace putting its logo between you and your families.
- **A copilot that knows your numbers.** Ask "Who still owes for this week?" and get the answer from today's live data — and each person sees only what they're allowed to: your coaches never see the money.

Band 2 — Not just bookings (the operating-system grid) Heading: A booking widget takes a payment. We run your whole business.

- **Sell** — branded storefront, real basket, add-ons and meals, waitlists, a "Book now" button for your existing site.
- **Run the day** — live register, ratios that do the maths, medication with a consent lock, allergy & SEND flags, incidents that reach the parent.
- **Manage the team** — safer-recruitment onboarding, DBS-aware rotas, clock-in, UK-law leave, payroll and a built-in CPD library.
- **Grow** — memberships, wallet credit, referrals, targeted discount codes, auto review requests, and a Growth Studio that puts a £ figure on your empty seats.

Band 3 — Switching is on us Heading: Already running on another tool? Moving over is the easy part.

Copy: We import your listings, families and upcoming bookings for you, and you can run alongside your old system until you're ready. Most freelancers are live within a few days; a company or network, site by site, so nothing breaks mid-term. A named person walks you through it. Common starting points: Class4Kids, Pembee, Bookwhen, Eventbrite or a pile of spreadsheets. CTA: How switching works →

Band 4 — Grow without switching software Heading: From one venue to a hundred, on one login. Copy:

The same system that runs a solo instructor's holiday club scales into a full franchisor command centre — territories on a map, live numbers from every franchisee, royalties worked out to the penny. No re-platforming as you grow. CTA: For franchise networks →

Band 5 — Proof (real, before launch — see §5.5) Heading: Providers who made the switch

- Testimonial slot ×3 — named provider quote + photo + business name (e.g. "[Name] keeps the £4,200 a year we used to lose to marketplace commission." — [Provider], [Business]).
- One quantified story callout — "[Business] kept £X last summer that a 4% marketplace would have taken."
- A "trusted by N UK providers" counter once real, and a real branded-storefront + register screenshot.

If named references don't exist yet, run a founding-cohort beta and gate this band — and the persona pages — on at least three referenceable providers. Until then, lead the proof strip with the founder-operator story (see §3.12) rather than shipping claim-only. Do not launch Home with an empty proof band.

Proof-points strip (feature truths — shown below the testimonials, not instead of them)

- No commission — one flat monthly fee, plus only the standard card processing charge
- Card payments settle into your own bank; we never hold your money
- Registers, ratios, medication and incident logs built in — safeguarding isn't a bolt-on

- Scales from a solo coach to a national franchise on one login
- Parents book, pay, message and see photos of their child's day under *your* brand
- A copilot that answers from your live data, so staff never see the money

Closing CTA: Fill your sessions. Lose the admin. Own your brand. → *Start free / Book a demo*

3.2 Platform overview

Goal: Prove breadth. Show the jobs the platform does so an evaluator reframes us from "booking tool" to "operating system".

Hero

- *Eyebrow:* One platform, not five tools
- *Headline:* **The pieces already know about each other**
- *Subhead:* Clock-in already knows the rota. The rota already knows the DBS. The register already knows who paid. One system instead of a booking widget, a spreadsheet, a WhatsApp group and a bank transfer — with nothing re-keyed between them.
- *Mid-page + end CTA (both to the same action):* Book a demo · See pricing

Section — Sell Your own branded storefront and real card checkout. Whole-week, any-days, fixed-block and drop-in pricing — the shapes childcare actually sells. Add-ons, meals and extras at checkout. Waitlists you work in one tap: offer a freed place to the next family with a time-limited hold, and watch it expire automatically if they don't take it. A "Book now" button you drop onto your existing site in one line of code. *Deep-dive* → *Bookings & storefront*.

Section — Run the day A live register on your phone. Ratios that fill themselves from the day's bookings and flag an over-ratio group before an inspector does. Medication you can't dose without parental consent on file. Allergy, medical and SEND flags on every child's row. Safeguarding that routes to your DSL with KCSIE references and LADO/MASH/999 one tap away. *Deep-dive* → *On the day*.

Section — Manage the team From the DBS check to the payslip in one record: safer-recruitment onboarding to a Single Central Record, rotas that refuse an out-of-date DBS, clock-in feeding timesheets, UK-law leave, appraisals, and a full CPD course library.

Rolling out: payroll runs (PAYE/NI/pension estimates), appraisals and the LMS are in beta — included in your plan, with live persistence rolling out through 2026. Onboarding, the Single Central Record, availability and DBS-aware rostering are enforced today.

Section — Handle the money No commission — takings to your own bank. VAT invoices and purchase orders, reconciliation for Tax-Free Childcare and vouchers, policy-driven refunds, and a five-tab finance hub your accountant will thank you for.

Section — Grow A Growth Studio that puts a £ figure on your empty seats and hands you straight to the AI writer to draft the email that fills them. Campaigns aimed at real bookers, memberships, wallet credit, referrals and auto review requests. *Deep-dive* → *Marketing & growth*.

Section — Works with your accounts Connects to Xero, QuickBooks and Sage for payroll and your books; card payments run on Stripe. (*Integrations roll out through 2026 — your salesperson will confirm what's live for your stack.*)

Section — Scale to a network An HQ command centre, map-drawn territories, royalties worked out automatically and read-only safeguarding oversight across every site. Built for owner-operators running several of their own sites *and* franchisors running a branded network. *Deep-dive* → *For Franchises / Head Office*.

CTA: See the register, storefront and copilot running on a real provider's day → Book a demo

3.3 AI — "Your live-data copilot"

Goal: Own the differentiator honestly. Lead with the one thing that's both true and hard to copy — it answers from *your* live operational data, scoped by role. Show what ships today; fence the roadmap clearly.

Hero

- *Eyebrow:* The copilot difference
- *Headline:* **A copilot that reads your live data — not a help-page bot**
- *Subhead:* Because we run the register, the till and the rota, the copilot has real numbers to stand on: today's register, your takings, who owes, which sessions are filling. It answers in plain English, and each person sees only what they're allowed to. A chatbot bolted onto a knowledge base can't do that — it doesn't sit on the data.

Section — Grounded in today, not last quarter's FAQ Ask "Who's booked in today?", "How much have I taken this week?" or "Who still owes for this week?" and get the real answer from your own live data — then a one-tap link straight to the screen to act on it. Find out and go do it become the same click.

Section — Answers that respect who's asking One copilot, five different views — owner, coach, parent, head office and platform — each showing only what that person is allowed to see. Your coaches see who's in, allergies and SEND for today, never your money or margins. Owners see the full picture. Head office gets a network-level read (each franchisee scoped to their own operation). It's read-only by design: it can look at everything and change nothing, so it's safe to hand to the whole team.

Section — A comms writer that drafts on-brand, in seconds Describe the gist — a closure notice, an event invite, a whole newsletter — and get a warm, on-brand draft back in seconds, ready to check and send. No blank-page dread, no agency fees. It drafts; it never auto-sends.

Section — A parent assistant that works any hour Families ask "What's my child got coming up?", "Do I owe anything?" or "How do I cancel?" in your app and get an instant, accurate answer about their own bookings and credit — cutting the calls and emails that would otherwise land on you.

Section — Ask it out loud Hands full mid-session? Speak your question and hear the answer read back aloud. (*Voice input works best in Chrome or Edge — see the demo runbook, Appendix B.*)

Section — On the roadmap (*clearly badged "Coming" / "In beta" — not live*) We're building the copilot toward a wider set of jobs: an **AI Front Desk** that answers calls and takes bookings, an **AI Listing Builder** you just talk to, a **Demand Radar** that predicts sell-outs, a **Safeguarding Watch** that flags expiring DBS and ratio gaps, and a **Waitlist Filler** that offers freed places automatically. These are the roadmap — not available today, and never demoed as if they are.

Section — Where your data goes (*trust block — sits on this page and links to Security*) Your data stays yours. It's used to answer *your* questions and nothing else — never to train anyone's model. Access is scoped by role and read-only. See our [Security & data protection] page for hosting, GDPR and processing detail.

Proof points

- Grounded in your live data, not a generic help bot
- Read-only by design — safe to give your whole team
- Shows each person only what they're allowed to see
- Reads answers back aloud, hands-free

CTA: See the copilot answer from a real provider's live numbers → Book a demo

3.4 For Freelancers

Goal: Convince a solo coach they can run like a big operation, keep their income, and keep their local brand — for £29/month, starting tonight.

Hero

- *Eyebrow:* For solo coaches, tutors and instructors
- *Headline:* **Run like a big operation. Keep the local brand parents love.**
- *Subhead:* A professional, own-branded booking website and real card checkout on day one — no marketplace fees eating into thin margins, no percentage skimmed off every child. Run your whole operation from your phone for a flat £29 a month.
- *Primary CTA:* Start free · *Secondary CTA:* See pricing
- *Reassurance:* Set up your first storefront in an afternoon. No contract, cancel anytime.

Section — Your own booking website, your name out front Parents book on a page that looks like your business — your name, your colours, your listings — and pay by card straight into your own bank. Drop a "Book now" button onto the site you already have in one line of code. Nothing for parents to download: they book in their browser in a couple of minutes.

Section — The back office you can't afford to hire

- A listing builder for the pricing childcare actually uses — whole weeks, any days, blocks, drop-ins, early/late finishes.
- A live register, ratios and allergy/SEND flags from a tablet in the sports hall — no office, no clipboard.
- Invoices, expenses with photo receipts, and a finance dashboard that replaces the shoebox and the spreadsheet.
- Legal leave calculations, DBS-aware rostering and a free CPD library — the compliance safety net big providers have, without hiring HR.

Section — Grow without a marketing budget The Growth Studio is your marketing manager: it tells you which quiet session to promote and which lapsed families to win back, then hands you to the AI writer with the email half-drafted before you've finished your coffee. Membership plans give regulars a standing discount or wallet credit that keeps them booking; refer-a-friend turns happy parents into your next customers.

Section — A copilot for the admin you hate "What did I take this week? Who still owes? Draft my closure email." Answered in moments, hands-free, between sessions.

Section — Moving from your current tool On Class4Kids, Eventbrite or spreadsheets? We import your listings, families and upcoming bookings for you, free, and you can run in parallel until you're happy. Most solo coaches are live within a few days.

Proof points

- No commission — you keep your bookings, paying only the standard card fee
- A branded website and real checkout on day one — no Eventbrite, no Class4Kids
- One flat £29/month, never a percentage of your takings
- Registers, ratios and safeguarding on the tablet in your hand
- *[Testimonial slot: one named solo-coach quote + photo]*

CTA: Start free → (secondary: Book a demo)

3.5 For Companies

Goal: Show a multi-site operator — whether running franchises or several of their own sites — the whole operation in one system, priced by team size, not turnover.

Hero

- *Eyebrow:* For established, multi-staff providers
- *Headline:* **Run the whole operation in one place — priced by your team, not your turnover**

- *Subhead:* Stop paying for five disconnected tools — bookings, HR, payroll, an LMS and comms — and re-keying between them. One system where clock-in feeds timesheets, and a lapsed DBS blocks the rota.
- *Trust strip under hero:* UK-hosted · GDPR-built · Your data never trains anyone's AI · [Security & data →]
- *Primary CTA:* Book a demo · *Secondary CTA:* See pricing

Section — One storefront, one checkout, every programme Run every camp, club and after-school programme through one branded storefront and one checkout, with capacity, waitlists and safeguarding handled per listing. Money lands directly in your own account — no commission scaling with your success.

Section — Run twelve sites like one A single command view of every site's revenue, occupancy and staffing. Drill into any one. League-table your locations to see who's flying and who needs support. Scope each site manager to their own location, so they see their register and rota but never head-office money or another site's data. *(For owner-operators of several sites — you don't need to be a franchise to run a network here.)*

Section — The full HR lifecycle, wired together

- Safer-recruitment onboarding to a Single Central Record, with a "Cleared to start" gate that won't turn green until the checks that matter are verified. **(Enforced today.)**
- DBS-aware rotas that refuse anyone whose DBS, first aid or safeguarding has lapsed — blocked by the system, not by memory. **(Enforced today.)**
- Clock-in with a live who's-in board, feeding timesheets. **(Live.)**
- Payroll with PAYE/NI/pension estimates on 2026/27 bands, appraisals with real performance signals, and a full CPD library. *(In beta — included in your plan, live persistence rolling out through 2026. Not live HMRC filing yet.)*

Section — Built to evidence safeguarding at inspection Registers with stamped head-counts, ratios that recalculate the moment you move a child, a medication consent lock the server enforces, all 14 UK statutory allergens tagged automatically, versioned policies with read-and-confirm, and DBS/insurance sorted soonest-expiry-first. Built to help you *evidence* ratios, DBS currency and medication consent when an inspector asks — with the DBS-and-medication locks genuinely enforced by the system.

Section — Money that nets it all out No-commission payments at volume, plus proper accounts-receivable — VAT invoices, purchase orders, reconciliation for funded places and vouchers — and a finance hub that nets collected-versus-owed across all your sites. *(Tax-Free Childcare and vouchers are accepted and reconciled today; full automated HMRC reconciliation is rolling out.)*

Section — Permissions that keep sensitive data safe A simple None / View / Edit grid across ~28 areas, so a coach never sees payroll or a child's medical notes.

Section — Getting your network across We import your existing families, bookings and staff records, roll out site by site so nothing breaks mid-term, and give you a named onboarding lead with a dated plan from sign-up to first live booking.

Proof points

- Priced by team size, never by booking volume
- One record from DBS to payslip — onboarding, rota, clock-in, leave and pay talk to each other
- The rota blocks a lapsed DBS — enforced, not a reminder
- Registers, ratios, medication and incident logs built in
- *[Testimonial slot: one named multi-site operator quote + photo]*

CTA: Book a demo → *(secondary: See pricing)*

3.6 For Franchises / Head Office

Goal: Sell the franchisor command centre and the continuity story — never re-platform as you scale — with numbers that survive a franchisor's diligence.

Hero

- *Eyebrow:* One platform, from solo coach to national network
- *Headline:* **Grow from one venue to a hundred without switching software**
- *Subhead:* The same operating system that runs a solo instructor's holiday club scales into a full franchisor command centre: your brand in front of every parent, live numbers from every franchisee, territories on a map, and royalties worked out to the penny. No per-booking commission. No middleman in your parent relationship.
- *Trust strip:* UK-hosted · GDPR-built · Data-processing agreement for your network · [Security & data →]
- *Primary CTA:* Book a demo · *Secondary CTA:* See pricing

Section — A head-office command centre See your whole network on one screen — revenue, bookings, families, active franchisees and who's falling behind. League tables spot your top performer and who needs support; attention alerts surface a safeguarding flag before it becomes a brand problem. Give regional managers and head-office staff their own scoped access — a regional lead sees only their patch, finance sees the money, safeguarding sees the incidents — so the command centre works for a head-office *team*, not just one owner.

Section — Royalties, worked out to the penny Set your royalty once — a percentage of revenue or a flat fee per booking — and see exactly what every franchisee owes over any date range, with a clear over-time chart. No month-end spreadsheet reconciliation. Export the figure or raise the invoice in a click.

Today each franchisee banks their own card takings directly and you invoice the royalty from the exact figure we calculate. Automatic card collection of royalties is on the roadmap.

Section — Territories on a real map Draw each franchisee's exact operating area, catch overlaps before they cause disputes, and formally approve the boundary. The listing builder warns when a venue falls outside a franchise's territory.

Section — Set it once, roll it out to everyone Turn any feature on or off for one franchisee or the whole network from a single switchboard. A dated milestone roadmap gives every new franchisee a professional launch-to-run plan, so a new site opens on-brand and on-process from day one. *(Central push-down of standard listings and policies is expanding — your salesperson will confirm what rolls out network-wide today versus per site.)*

Section — Oversight without micromanaging Network-wide, view-only safeguarding oversight — incidents and first aid, broken down per franchise — without editing a site's records. Invite-only onboarding means nobody self-registers into your brand. *(Medication oversight across franchises is rolling out; ask to see incident and first-aid oversight in the demo.)*

Section — Consistent brand, local autonomy Parents book, pay and get updates under each franchisee's local brand and your network's name. Every franchisee's families, money and bookings sit behind their own data wall — one franchisee can't browse another's operation.

Section — What your franchisees get Each franchisee runs their own branded storefront, banks their own card takings directly, and gets the full operating system — register, ratios, staff, parent app — on one login. Adoption is easy because it's the tool that makes their day easier, not just a reporting layer pointed at them.

Section — Billing that scales with you A flat HQ base plus a per-franchisee fee that gets *cheaper* per franchisee as your network grows — and your own head-office venues are included free. See a worked example on the Pricing page.

Proof points

- One login from solo freelancer to national franchisor — no re-platforming
- No commission on bookings; your brand, not ours, in front of every parent
- Royalties calculated automatically — % of revenue or flat per booking, any date range

- Map-drawn territories with overlap warnings and formal HQ approval
- Network-wide safeguarding oversight — view-only by design
- *[Testimonial slot: one named franchisor quote + network size]*

CTA: See the command centre → Book a demo

3.7 Parents — "The family experience"

Goal: Sell the provider on giving families a calm, branded, modern app they'll actually use — and that keeps customers coming back to *them*.

Hero

- *Eyebrow:* For the families you already serve
- *Headline:* **A parent app that looks like your brand — not ours**
- *Subhead:* Give every family one calm home for booking, paying, their child's day and your news — under your name. Nothing to download: parents get a private link and book in their browser. No marketplace, no middleman, no cut of your takings.

Section — Your brand, front and centre Every screen carries your name and colour, so the relationship — and the repeat business — stays yours. Parents get a private link, log in on any phone browser, and book and pay in a couple of minutes on one slide-in panel without leaving the page.

Section — Money that stays in your business Cancellations and amends can be refunded as spend-only wallet credit scoped to you, so money never leaves for a bank card. Membership plans give members a standing % discount or wallet credit applied at checkout — stickier families and more repeat bookings. *(Membership benefits apply at checkout today; recurring auto-billing is rolling out.)*

Section — Their child's day, in one place Consented photos and "their work" shared straight to each parent (whose thank-you replies you can reuse as marketing). A newsfeed with can't-miss newsflash banners for urgent items. Their child's timetable across everything they're booked into — fewer "what time, which room?" calls.

Section — Speaks 11 UK languages, in the parent app The parent booking app speaks 11 UK languages — Polish, Romanian, right-to-left Urdu and Arabic, Welsh and more — so more of your families can book in the language they think in, without you writing a word.

Section — Answers on tap, referrals that sell themselves Families get instant answers to "What's coming up? Do I owe? How do I cancel?" Refer-a-friend gives each family a personal link, and rewards apply automatically at checkout.

Section — Will parents actually use it? Nothing to install and about two minutes to book means families adopt it fast. *[Adoption proof slot: "X% of a provider's families booked in the app within a week" or a parent testimonial — fill before launch.]*

Proof points

- Book and pay in a couple of minutes, without leaving the activity page
- Your brand on every screen — no marketplace logo in front of your families
- No cut of your takings — you're not renting customers back from a booking site
- Refunds become spend-only wallet credit, so money stays in your business
- The parent app speaks 11 UK languages, including right-to-left Urdu and Arabic, plus Welsh

CTA: Give your families an app that looks like you → *Start free / Book a demo*

(Copy guard: market as a branded, responsive web app — do not headline "installable to home screen"/PWA until the manifest ships.)

3.8 Pricing

Goal: Make the flat-fee, no-commission story the hero and genuinely remove the "what will it really cost me" fear — with concrete numbers, the card fee stated up front, and no lock-in.

Hero

- *Eyebrow:* Simple pricing, on your side
- *Headline:* **One flat fee. Never a cut of your bookings.**
- *Subhead:* A marketplace skims a percentage of every booking — so the busier your summer, the more it takes. We charge the same flat monthly fee whether you sell 10 places or 10,000, and your takings go straight to your own bank.

The alignment line: *You grow, we don't reach into your till.*

Plan table (*publish concrete bands — see §5.2 to confirm figures before launch*)

	Freelancer	Company	Franchise / Head Office
Price	£29/mo flat	From £49/mo (£49 up to 5 staff · £79 up to 15 · £129 up to 40)	£99/mo HQ base + per-franchisee fee (cheaper per franchisee as you grow)
Priced by	Flat	Team size, not booking volume	Network size
Commission	0%	0%	0%
Best for	Solo coach, tutor, instructor	Multi-staff camps, clubs, wraparound, owner-operators of several sites	Franchisor / head office
Includes	Branded storefront & checkout, registers, parent app, finance basics, AI copilot	Everything in Freelancer + full HR/payroll, safeguarding suite, permissions, team-wide copilot	Everything in Company + HQ command centre, territories, royalty calculation, oversight; own venues free

Worked franchise example: $A\ 6\text{-franchisee network} = £99\ HQ\ base + 6 \times [per\text{-franchisee fee}] \approx £[X]/mo\ all\text{-in}$ — your own head-office venues included free. (Replace [X] once the per-franchisee number is signed off — §5.3.)

What about card fees? Stripe charges its standard per-transaction fee (roughly 1.5% + 20p on UK cards) *directly*, the same as any card payment anywhere — we add nothing on top. So it's zero commission to us, not zero cost; the difference is a marketplace charges you that card fee *and* takes a cut. (SMS notifications, where used, come from a plan allowance — ask about add-ons.)

No lock-in. Rolling monthly. No setup fee. Cancel anytime. Your data is always yours to export.

Why flat fee (three cards)

- **Keep your bookings.** Card payments land in your own bank; we never hold your money.
- **No nasty surprises.** A busy month rewards you, not us.
- **Everything included.** Bookings, HR, safeguarding, marketing and the copilot in one price — no bolt-on tools to buy.

Pricing FAQ

- *Do you take a percentage?* No. Zero commission. One flat monthly fee.

- *Where does the money go?* Straight to your own Stripe account via a direct charge — we never hold it.
- *Is there a setup fee?* No setup fee.
- *Is there a free trial?* Yes — start free, no card required. (*Confirm exact trial terms — §5.2.*)
- *What about card fees?* Stripe's standard per-transaction fee applies directly; we add nothing.
- *Am I locked in?* No. Rolling monthly, cancel anytime, export your data whenever you like.
- *Can I move up a plan as I grow?* Yes — one login, no re-platforming.
- *How do I move from my current tool?* We import your listings, families and upcoming bookings for you, free. See the FAQ.

CTA: Start free · Book a demo

*(Copy guard: pricing model is defined and shown in-app; automated Stripe card **billing** for subscriptions is a later milestone — don't promise "automated card billing" on this page yet. Never ship a customer-facing "confirm with founder" string.)*

3.9 Why us (vs booking platforms)

Goal: Give an evaluator defensible comparison ammunition on one page — fair, specific, and impossible to dismiss as a strawman.

Hero

- *Eyebrow:* The honest comparison
- *Headline:* **A booking widget takes a payment. We run your whole business.**
- *Subhead:* Two kinds of tool sit next to us: marketplaces that take a cut and put their brand first, and other booking software that's flat-fee but stops at the checkout. Here's the difference, line by line — no strawmen.

The comparison table (*full table in Section 4 — render here in full, two honest rival columns*).

Proof-point band

- No commission — every booking pays out to your own bank account
- Your brand, not ours, in front of every parent
- A copilot grounded in your live data — not a generic help-page bot
- Registers, ratios, medication and incident logs built in — not a checkout
- A full franchise layer most booking tools don't attempt
- *[Testimonial slot beside the CTA]*

CTA: See it running on a real provider's day → Book a demo

3.10 Security & data protection

Goal: Answer the first due-diligence question for a product holding children's medical notes, SEND flags, DBS records and a business's cashflow.

Hero

- *Eyebrow:* Your data, handled properly
- *Headline:* **You're trusting us with children's records and your livelihood. Here's how we protect both.**

Section — Where your data lives UK/EU hosting on [named cloud provider]. Encrypted in transit and at rest. Daily backups.

Section — Children's data by design Access is scoped by role — each person sees only what they're allowed to. The copilot is read-only and never used to train anyone's model. Sensitive records (medical, SEND, safeguarding) sit behind an audit trail.

Section — Who controls what You're the data controller; we're your processor. A data-processing agreement (DPA) is available for companies and networks.

Section — Payments never touch us Card details go straight to Stripe (PCI DSS Level 1). We never see or hold card data, and takings settle into your own bank via a direct charge.

Section — Your data is yours Export it any time, in standard formats. If you ever leave, you take your data with you — and if we ever shut the service down, we guarantee a full export window so nothing is trapped.

Section — Compliance GDPR-built and ICO-registered. *[List any certifications actually held — e.g. Cyber Essentials — only if true.]*

CTA: Questions from your DPO? Talk to us → Book a demo

Founder to confirm the true specifics (cloud region, ICO number, DPA availability, certifications) before publish — claim only what's real.

3.11 FAQ

Goal: One place for the recurring objections, grouped so buyers self-serve and search finds them.

Money

- *Do you take commission?* No — zero commission. One flat monthly fee.
- *What does it really cost, all in?* Your subscription plus Stripe's standard card fee (roughly 1.5% + 20p on UK cards), which goes to Stripe directly. Nothing else.
- *Where does the money go?* Straight into your own bank via your own Stripe account. We never hold it.

Switching & setup

- *I'm on Class4Kids / Pembee / Bookwhen / spreadsheets — how do I move?* We import your listings, families and upcoming bookings for you, free, and you can run alongside your old tool until you're ready.
- *How long does setup take?* A freelancer can have a branded storefront live in an afternoon; most are fully live within a few days. Companies and networks roll out site by site.
- *Is there a setup fee?* No.

Security & data

- *Where is my data hosted?* UK/EU, encrypted, backed up daily. See the Security page.
- *Is it GDPR-compliant?* Yes — GDPR-built and ICO-registered; a DPA is available.
- *Does the AI train on my data?* No. It answers your questions from your data and nothing else.
- *What happens to my data if I leave, or if you shut down?* You can export it any time, and we guarantee an export window if the service ever closes.

Support

- *Is support UK-based and included?* Yes — real people, UK-based, included in your plan. Guided onboarding comes as standard. *[Confirm channels and hours — \$5.7.]*
- *Who do I call if it breaks on a camp morning?* [Support channel + hours]. The register runs in your browser on mobile data if the venue Wi-Fi drops.

Contract

- *Am I locked in?* No. Rolling monthly, cancel anytime.
- *Is there a free trial?* Yes — start free, no card required.

For staff & parents

- *Do staff or parents need to download an app?* No. Both get a private link and log in on any phone browser.

- *What if I lose signal mid-register?* The register works on mobile data; full offline mode is on the roadmap.

Compliance

- *Will it help at an Ofsted inspection?* It's built to help you evidence ratios, DBS currency and medication consent, with the DBS and medication locks enforced by the system. (We help you evidence compliance; the inspection outcome is always yours.)

3.12 About / Why we built this

Goal: Provide the founder-operator credibility that carries a challenger brand with few logos yet — often the strongest proof available at launch.

Hero

- *Eyebrow:* Why we built this
- *Headline:* **Built by people who've run the 6am register — not just written the software**

Body We ran the camps, chased the unpaid invoices, re-keyed bookings from a widget into a spreadsheet at 11pm, and watched a marketplace take a cut of a summer we'd built. Every existing tool solved one slice and took a fee for the privilege. So we built the thing we wanted: your brand out front, your money in your own bank, and the whole operation — register to payroll to network — in one login. No commission, no middleman, no renting your own families back.

What we believe

- Your income is yours. Software should charge a fair flat fee, not skim your busiest month.
- Your customers are yours. Your brand goes in front of parents, not ours.
- Safeguarding isn't a bolt-on. Registers, ratios and consent locks belong in the core, not an add-on.

CTA: See what we built → Book a demo

3.13 Book a demo / Contact

Goal: Convert considered buyers; qualify by persona; give the not-ready visitor a lower-commitment path.

- *Eyebrow:* See it on a real provider's day
- *Headline:* **Book a 20-minute demo**
- *Subhead:* We'll show you a branded storefront, the register and the copilot answering questions on live data — then talk pricing for your size. No obligation.
- *Form (4 core fields, rest optional/progressive):* Name · Email · "I'm a..." (Freelancer / Company / Franchise) · Roughly how many staff or sites
- *What happens next (under the form):* **1.** We reply within one working day. **2.** A 20-minute screen-share on a live provider's data. **3.** If it fits, we help you set up and import — most providers are live within a week.
- *Microcopy:* No spam, no obligation. We only use your details to arrange your demo. [Privacy Policy]
- *Not ready for a call?:* See the 2-minute interactive demo — no signup, no card. → *Start free*
- *Reassurance line:* No commission, ever. Your money lands in your account, not ours.
- *CTA:* Book my demo

4. The differentiators & "why"

The "vs booking platforms" table (*two honest rival columns — no strawmen*)

	Marketplace (takes a cut)	Other booking software (flat-fee)	[Name]
Commission	A % of every booking	Usually 0%	0% — one flat monthly fee
Where the money lands	They hold funds and pay you out later	Often taken into their Stripe, paid out to you later	Stripe Connect direct charge into your own bank — we never hold it
Whose brand parents see	Theirs — you rent your own customers back	Usually yours	Yours — branded storefront and parent app; per-franchisee branding
AI	Generic help-page chatbot, if any	Generic help-page chatbot, if any	A copilot grounded in your live data, showing each person only what they're allowed to see
Running the day	Checkout only	Register — but no ratio maths, medication consent lock or DBS-aware rota	Register, ratios, medication consent lock, allergy/SEND flags, incidents & safeguarding
Staff & HR	None	Rarely	Onboarding to SCR, DBS-aware rotas, clock-in, payroll, UK-law leave, CPD library
Money admin	Take a card payment	Basic invoicing	VAT invoices, POs, TFC/voucher reconciliation, policy-driven refunds, finance hub
Franchise layer	None	None	HQ command centre, map territories, automatic royalty calculation, network oversight
Parent reach	English booking form	English booking form	Branded parent app in 11 UK languages incl. RTL Urdu/Arabic and Welsh

Notes: rows describe the typical UK tool in each column; specific rivals vary. The knockout rows — direct-to-bank settlement, the safeguarding depth, the franchise layer and the live-data copilot — hold against both.

The copilot story

Rivals bolt a generic bot onto a knowledge base. Because we run the operational surface — registers, takings, staff, safeguarding, the whole network — our copilot stands on *your* live data and answers *your* questions, then links you to the screen to act. A competitor can copy a chatbot in a quarter; they can't copy access to a data surface they don't own. That's the structural point — and it's why we describe the copilot by what it does today, with the wider roster clearly marked as roadmap.

Rationale for the big content choices

- **Lead with money and brand, then the back office and copilot.** Money and brand are the emotional core and the clearest wedges; the AI lands as what makes the system smarter, not as a hype-first hero.
- **Reframe as an operating system.** The breadth (day-running + HR + franchise) justifies a flat subscription instead of a commission — so Platform overview and the persona pages carry as much weight as Home.
- **Franchise is the moat.** Most booking tools don't attempt the HO→franchisee relationship; give it a full page.
- **Proof, trust, switching and self-serve are launch blockers, not nice-to-haves.** A claim-only site from a new, unnamed brand asking for children's data and card payments converts far below its potential. Real testimonials, a Security page, a migration story and a self-serve path ship with v1.

Honesty guards baked into copy (so every claim survives a live demo)

Every claim below is written to match what the code ships **today**:

- **Waitlists** are worked in one tap (offer a freed place with a time-limited hold; the hold expires automatically). Say that — *not* "waitlists re-fill automatically". Automatic filling is the roadmap's Waitlist Filler.
- **Memberships** deliver their benefit (credit / % off) at checkout on join. Say "membership plans", *not* "monthly", "predictable recurring revenue" or "auto-billed" — recurring Stripe billing is Phase 2.
- **Royalties** are *calculated* automatically to the penny; each franchisee banks their own takings and HO invoices. Say "calculated", *never* "collected/charged automatically" — auto-collection is roadmap.
- **AI roster:** only the copilot (live-data answers, five role views, voice read-back) and the on-brand comms writer are shipped. Front Desk, Listing Builder, Demand Radar, Safeguarding Watch and Waitlist Filler are clearly badged "coming". The comms writer drafts on-brand tone; it does not learn the provider's personal voice — don't say "in your own voice".
- **AI scopes:** five (owner, coach, parent, head office, platform), not six. Franchise reuses the operator/owner view scoped to that franchisee.
- **Safeguarding:** "built to help you evidence at inspection", *not* "stands up at inspection". Use "enforced" only where the server blocks the action today — DBS-aware rostering, medication consent lock and the cleared-to-start gate qualify; payroll/appraisals/LMS do not.
- **Data walls:** "one franchisee can't browse another's operation" — the money/listings/bookings/registers/comms isolation is shipped. Do *not* claim absolute "never" for incidents/medication cross-franchise until child→booking scoping lands; keep medication oversight badged "rolling out".
- **TFC/vouchers:** "accepted and reconciled" today (manual); *not* "automated TFC reconciliation". Remove/gate the internal "Amir — this is where TFC is wired" dev banner before any demo touches Reconciliation.
- **Payroll/leave/timelock/appraisals/LMS:** demo-complete with backend persistence in progress — clock-in/timesheets and onboarding/SCR/availability/DBS-aware rostering are genuinely wired; frame the rest as "in beta, rolling out through 2026", never as live HMRC filing.
- **CPD library:** the seed library ships 60+ courses — say "a full CPD library (60+ courses)" or "39+", not a stale exact "39". Confirm the live count before publishing a number.
- **Custom domains / white-label:** one branded storefront per tenant today; per-franchisee *branding* is real, custom *domains/subdomains* are positioned, not live. Don't headline "white-label" as custom domains.
- **SMS:** a plan allowance, not a live broadcast channel — no standalone SMS page.
- **Parent app:** a branded, responsive web app (private link, browser login, nothing to download) — not yet a home-screen PWA.
- **Growth Studio** ranks plays with a £ figure and hands you to the AI writer; it doesn't itself write the email. Say "puts a £ figure on your empty seats and hands you to the writer".
- **Quantified benefits** (hours saved, seats filled, commission kept) are used only where measured; until then, any figure is a clearly-labelled illustrative worked example.

5. Open questions for the founder

1. **The name (P0).** Decide before build; the "your brand, not ours" positioning is unbuildable on a placeholder, and there's the schools-only *activityos.co.uk* collision to out-position. **Naming brief:** the name must (a) not read as "schools software", (b) survive a solo coach saying it to a parent ("book on [Name]"), and (c) support a possessive brand voice. Bring 3 trademark-checked, domain-available routes with a one-line positioning rationale each. Scrub every placeholder from build assets and `<title>` tags.
2. **Pricing numbers to publish.** Confirm: Freelancer £29; Company bands (£49 up to 5 / £79 up to 15 / £129 up to 40 — right thresholds?); free-trial terms; annual discount if any. The plan now publishes concrete bands — sign them off or adjust.
3. **Franchise per-franchisee fee.** The per-franchisee subscription (not a cut of bookings) is confirmed; the "75%-of-base" number is still under discussion. Fix it so the worked example (\$3.8) can show a real total.
4. **AI roadmap labelling.** Confirm live = copilot + comms writer; coming = Front Desk, Listing Builder, Demand Radar, Safeguarding Watch, Waitlist Filler. Agree we never imply phone-answering, auto-booking or auto-waitlist-fill exist today.
5. **Proof (launch blocker).** Secure at least 3 named provider quotes (photo + business name), 1 quantified "keeps £X" story, and real storefront/register screenshots. Which tenant/brand can we screenshot? If none exist, run a founding-cohort beta and gate the persona pages + Home proof band on 3 referenceable providers.
6. **Backend-pending features on the page.** Sign off the honesty guards in §4 — especially TFC, custom domains, membership billing, SMS, payroll RTI, waitlist auto-fill, royalty collection — so sales never overclaims in a demo. Confirm the internal TFC dev banner is removed/gated.
7. **Support model.** UK-based? Channels (chat/email/phone)? Hours? Response times? Who fields demo leads? Needed for the FAQ and Security/persona trust lines.
8. **Self-serve path.** Is "Start free" a real self-serve signup at launch, or a no-login interactive sandbox? Decide before the CTA ships (see Appendix B).
9. **Security specifics.** Confirm cloud region, ICO registration number, DPA availability, and any certifications (Cyber Essentials etc.) before the Security page publishes — claim only what's real.
10. **Comparison tone.** Comfortable with the two-column "Marketplace vs Other booking software" table (recommended) and no named competitor, or do we want named "alternative to X" pages in phase two?

Appendix A — Metadata & SEO (build-time)

- **Per-page `<title>` + meta description**, each unique, keyword-led, and never containing the placeholder name. Target terms: Home → "children's activity booking software UK"; Company → "holiday club / after-school club management software"; Franchise → "franchise management software for activity networks"; Parents → "branded parent booking app".
- **One H1 per page**, matching the headline above.
- **Structured data:** Organization, Product/SoftwareApplication, and FAQPage schema on the FAQ and Pricing pages.
- **Clean URL slugs** (`/for-companies`, `/pricing`, `/security`), canonical tags on persona pages.
- **OG/social-share** title, description and image per page (no placeholder name in the image).
- **Phase-two organic engine:** Resources/Guides hub + "alternative to [competitor]" pages.

Appendix B — Demo & launch readiness checklist

- **Product name chosen** and scrubbed from all build assets and `<title>` tags. (P0)

- **Proof assets in hand** — 3 named testimonials + 1 numbers story + real screenshots, or beta cohort secured. (*Launch blocker.*)
- **AI demo environment:** **GROQ_API_KEY** and model configured on the demo server, or the copilot and comms writer return 503 and the flagship demo dies silently. Verify before every demo.
- **Payments demo:** **STRIPE_SECRET_KEY** configured, or checkout returns 503.
- **Demo tenant:** use the seeded review tenant; seeds are date-stamped, so re-run the seed the same day (register/growth demos otherwise look wiped).
- **Voice demo:** run in Chrome or Edge (voice input needs webkitSpeechRecognition; Safari/Firefox fail silently) on a machine with a good en-GB voice installed.
- **TFC/Reconciliation:** the internal "Amir — this is where TFC is wired" dev banner is removed or gated before any demo touches that screen.
- **Demo free-navigation set (safe to click into live):** onboarding/SCR, DBS-aware rostering, availability, storefront/checkout, register/ratios, medication consent lock, finance hub, the copilot and comms writer. **Do not free-navigate** payroll runs, appraisals, LMS persistence, membership billing, auto-royalty collection or cross-franchise medication — demo these as narrated "rolling out" only.
- **Legal live:** Privacy Policy, Cookie Policy + consent banner, Terms before any lead form goes live.

Appendix — What the critics flagged & how we fixed it

Average critic score before revision: 5.4 / 10 — Skeptical buyer 4 · Positioning strategist 6 · CRO 4 · Accuracy fact-checker 7 · Brand voice/copy 6 · Completeness 6 · Franchisor 5.

Confirmed final page list (v2): Home · Platform overview · AI ("Your live-data copilot") · For Freelancers · For Companies · For Franchises/Head Office · Parents · Pricing · Why us · **Security & data protection (new)** · **About / Why we built this (new)** · **FAQ (new)** · Book a demo/Contact · **Legal & footer (new)**. Phase-two: feature deep-dives, Integrations, Resources/Guides, "alternative to [competitor]" pages. Plus two build-time appendices (SEO/metadata, demo-readiness checklist).

Skeptical buyer (4/10)

- **Zero proof → proof designed in.** Home proof band (3 named testimonials + a quantified "keeps £X" story + real screenshots) and testimonial slots on every persona page; proof made a launch blocker; founder-operator About page as fallback credibility if no logos yet.
- **No migration story → "Switching is on us" band** on Home + migration sections on Freelancer/Company/Franchise + an FAQ entry, naming Class4Kids/Pembee/Bookwhen/Eventbrite/spreadsheets — "run in parallel, live in days".
- **Half-built features sold as live → "Live today" vs "Rolling out" split** on the actual bullets (payroll/appraisals/LMS badged beta; only DBS-lock, medication lock, cleared-to-start and clock-in marked enforced).
- **Strawman table → specific, defensible rows** ("Register — but no ratio maths / medication lock / DBS-aware rota").
- **Inspection over-promise → "built to help you evidence at inspection";** "enforced" reserved for server-blocked actions.
- **Demo-only funnel → dual CTA** with self-serve "Start free" primary for freelancers.
- **Vague "From £49" / "keep 100%" → concrete bands + card-fee line** stated up front.

Positioning & differentiation strategist (6/10)

- **"Your own AI team" over-index → AI demoted to third beat;** hero singularised to "your whole operation in one place".
- **"Royalties collected automatically" → "calculated to the penny" everywhere.**
- **0% wedge (matched by SaaS rivals) → repositioned around direct-to-bank Stripe Connect settlement** as the structurally unmatchable claim; comparison table split into Marketplace vs Other booking software.
- **Five inconsistent AI names → one "copilot" site-wide;** scopes corrected to five.
- **Generic "operating system" heroes → concrete wiring** ("clock-in already knows the rota...").
- **Absolute "the one thing no rival has" → mechanism claim** ("grounded in your live data — a bolt-on bot can't"). Added About/founder page.

Conversion / CRO (4/10)

- **"Confirm with founder" placeholder killed;** concrete pricing + "No setup fee / cancel anytime / rolling monthly".

- **Self-serve path added**; demo form cut to 4 fields with "what happens next", GDPR microcopy, and a no-signup sandbox fallback.
- **Data-safety alarm answered** with a Security page + trust blocks on the AI and Company pages.
- **Lock-in, switching, parent-adoption objections** each handled on-page.
- **"Proof points" relabelled** and placed below real testimonials; mid-page CTAs added.

Accuracy fact-checker (7/10)

- **Waitlist auto-fill** → **one-tap manual offer with expiring hold** (auto-fill → roadmap).
- **"Monthly memberships / recurring revenue"** → **benefit-on-join at checkout**; recurring billing badged rolling out.
- **TFC "automatic"** → **"accepted and reconciled" (manual)**; checklist item added to gate the internal dev banner.
- **"Six brains"** → **five scopes**; **"in your own voice"** → **"on-brand"**; **"39 courses"** → **"60+ / full CPD library"**; voice-demo browser caveat + GROQ/Stripe-key + date-stamped-seed items added to the demo runbook.

Brand voice & copy editor (6/10)

- **Broken sentences fixed** (Pricing subhead rewritten; Franchise eyebrow → "One platform, from solo coach to national network").
- **"role-scoped" jargon removed** from customer copy (→ "each person sees only what they're allowed to").
- **"actually" crutch, "growth on autopilot", "photo moments" cut**; refrain standardised — "A booking widget takes a payment. We run your whole business."; canonical demo question unified ("Who still owes for this week?").
- Added SEO/meta appendix, demo-form microcopy, footer/legal, CTA vocabulary.

Completeness critic (6/10)

- Added **Security page, About page, FAQ, Integrations section, legal/footer pages, self-serve path, SEO appendix, support/SLA lines, reliability/offline honesty, "nothing to download" line, accessibility statement, "what happens next"** — and standardised the Stripe card-fee caveat on every "no commission" claim.

Franchisor / multi-site operator (5/10)

- **"Royalties collected** → **calculated"** with the invoice reality stated.
- **Absolute data-wall "never" softened**; medication oversight badged rolling out.
- Added **migration/implementation story, network proof slot, an owned-multi-site block on the Company page ("Run twelve sites like one"), HO-internal regional roles, set-once-roll-out standardisation, network trust/DPA strip, franchisee-side value section, and a worked network pricing example.**

Guards preserved: the full honesty-guards block and the vs-booking-platform table + copilot story are retained and expanded (§4) — now covering waitlists, memberships, royalty calculation and the AI roster explicitly.
